#### **DETAILED ACTION**

#### Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 2. Claims 20-39 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Newly added independent claims 20, 29, 30, 36 and 39, in line 5, recite "a target bandwidth." However, the examiner could not find any references in the specification nor the drawings for the phrase; instead, the original disclosure uses the terms "target rate" or "target data rate."
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 47 and 48 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 47, line 1, "the measured data rate" lacks a proper antecedent basis; the phrase should be rewritten as --a measured data rate--.

Claim 48, line 1, "the round trip time" lacks a proper antecedent basis; the phrase should be rewritten as --a round trip time--.

Application/Control Number: 10/790,272

Art Unit: 2663

#### **Double Patenting**

Page 3

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 42-45 and 49 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 18/17 of U.S. Patent No. 6,741,563. Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious for a skilled artisan to delete limitations in a patented claim for the reason that the current claims are open-ended and thus, would not have excluded those limitations. A side by side comparison for application claim 42 and patent claim 18/17 shows that the each limitation in the application claim has a corresponding limitation in the patent, wherein a node and transmission station are equivalent. Similar comparisons can be done with the other claims, while with respect to claim 44, it would have been obvious to use the TCP protocol since it is a well known protocol for use in a packet communication environment.

Application/Control Number: 10/790,272

Art Unit: 2663

#### 10/790,272

42. A method for controlling the rate of data packets transmitted between first and second nodes in a packet communication environment,

wherein the first node is operative to transmit at least one packet associated with a flow to the second node, and wait for acknowledgment of at least one transmitted packet before transmitting subsequent packets associated with the flow, said method comprising forwarding at least one packet corresponding to a flow from a first node to a second node;

receiving an acknowledgment packet from the second node to the first node, the acknowledgment packet acknowledging at least one packet in the flow transmitted from the first node,

wherein the acknowledgment packet received from the second node includes a window size indicator that specifies an allowable range of transmission of data beyond a range of data acknowledged as a window size to be advertised from said second node to said first node;

selecting a substitute window size indicator for said window size indicator to modify the rate of transmission of packets from the first node:

inserting said substitute window size indicator into said acknowledgment packet; and

## 6,741,563

17. A method for controlling the rate of data packets transmitted between first and second transmission stations in a packet communication environment, wherein the first transmission station is operative to transmit at least one packet associated with a flow to the second transmission station, and wait for acknowledgment of at least one transmitted packet before transmitting subsequent packers associated with the flow, said method comprising: forwarding at least one packet corresponding to a flow from a first transmission station to a second transmission station;

receiving an acknowledgment packet from the second transmission station to the first transmission station, the acknowledgment packet acknowledging the at least one packet from the first transmission station:

18. The method of claim 17 wherein the acknowledgment packet received from the second transmission station includes a window size indicator that specifies an allowable range of transmission of data beyond a range of data acknowledged as a window size to be advertised from said second data transmission station to said first data transmission station,

wherein the method further comprises selecting a substitute indicator for said window size indicator based on the target rate corresponding to the flow;

and inserting said substitute indicator into said acknowledgment packet.

Art Unit: 2663

forwarding the acknowledgment packet to the first node.

(inherent since the acknowledgment packet is received at the first transmission station--see above)

### Allowable Subject Matter

- 7. Claims 40 and 41 are allowed.
- 8. Claim 46 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 9. Claims 47 and 48 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 10. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to anticipate or make obvious the features in claim 40 of deleting or forwarding a retransmission of the first data flow based on the acknowledgment of the first data flow stored in a memory and in claims 46-48 of computing the substitute window size indicator based on an attribute metric of the communications path.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melvin Marcelo whose telephone number is 571-272-3125. The examiner can normally be reached on Mon-Fri 8:30-5:00.

Art Unit: 2663

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chau Nguyen can be reached on 571-272-3126. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
